

Project InVision International SMART Technical Services

MAXIMIZE THE VALUE OF YOUR INVESTMENT

Our professional services team has successfully completed hundreds of installations. We have a deep understanding of how our products can apply to the markets and industries we serve, allowing us to tailor and fine-tune our applications for optimal performance. We lower the risk of your implementation and your total cost of ownership—helping you to achieve a faster return on your investment.

GET TANGIBLE RESULTS FASTER

Project InVision's SMART Technical Services are an essential part of how we help you keep your Project InVision solutions performing to your expectations. Technical services improve your ability to proactively manage your Project InVision application configurations and operational practices in order to deliver the stability, performance and reliability you require.

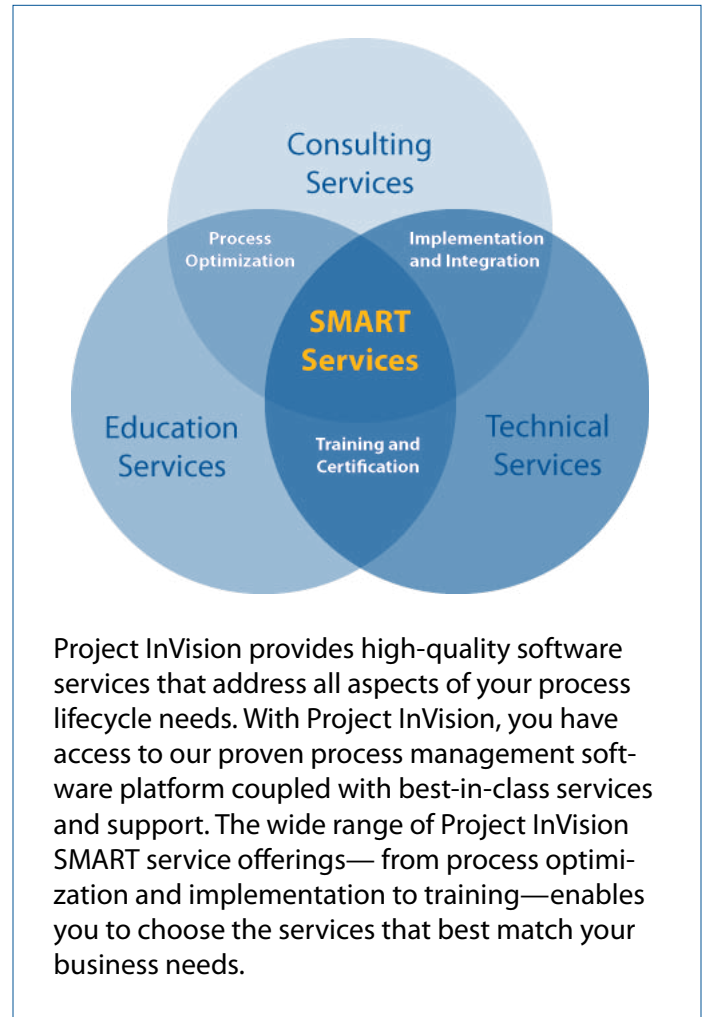

Project InVision SMART Technical Services help you:

- Anticipate, detect and resolve problems that compromise platform availability and performance
- Reduce administrators' workloads and time investment on platform configuration basics
- Use your employee resources more efficiently
- Reduce risk through robust proactive services—avoiding problems before they occur
- Increase end-user productivity by optimizing processes and application performance

FEATURED SERVICES

Custom Report Writing and Certification

Custom reports can be powerful tools to help your organization gather and analyze critical data. But these reports can also be time-consuming and complex to build. Let our experts quickly and cost-effectively create and implement new Crystal reports that turn your data into important, actionable information, allowing you to make informed decisions.

Automation Services

Automate your workflow through custom SQL triggers, stage gates, and notifications/alerts based on customer-specific business criteria.

System Optimization

Maximize the performance of your database with virtually any equipment and network configuration.

Application Integration

Sharing information across your organization is essential to help you increase the productivity of your employees and drive greater customer satisfaction.

While Project InVision's applications are tightly integrated, our professional services team can help you integrate them with your other enterprise applications. This allows you to easily share and maintain critical information throughout your enterprise.

Data Management and Migration

The success you achieve with your Project InVision solution depends on the business information it contains. But information is often incomplete or spread out among a variety of databases or applications.

To maximize your productivity and transition from your old applications, you need a unifying data management strategy that enables your company to address your business needs in the best way. We can analyze your business drivers and evaluate your business process in order to uncover ways to increase productivity and help you craft the appropriate data management strategy. Project InVision's SMART Technical Services team can help you migrate your data from virtually any application quickly, efficiently, and effectively so you can further optimize the value you receive from your Project InVision solution.

ABOUT PROJECT INVISION INTERNATIONAL

Project InVision International provides software solutions to improve business performance to professional service firms and their clients including industry leaders like PricewaterhouseCoopers, KPMG International, AT&T, EDS, and TELUS. Project InVision's enterprise and on-demand platforms help businesses automate processes such as Project and Portfolio Management, Governance, Risk and Compliance, and Professional Services Automation. Project InVision International, founded in 1991, is privately held and headquartered in the San Francisco Bay area.
